

WBC2022 BUILDING OUR FUTURE: RESEARCH PRACTICE TO ENHANCE the lives of CURRENT and FUTURE GENERATIONS 27 Jun–30 Jun 2022, Melbourne

The World Building Conference will sharpen the focus of our international building and construction industry and research community on improving our world.

Themes of the conference will include:

- Climate change and environmental sustainability, including construction and demolition waste and sustainable supply chains.
- Addressing poverty and inequality, especially through access to appropriate social and affordable housing.
- Digital Construction/Construction 4.0.
- Smart built environment/smart cities/smart communities including transport networks.
- Industrialised/offsite construction/pre-assembly.
- Responding to COVID-19 – how the built environment supports health and well-being and how construction and the built environment contribute to economic recovery.

The conference will showcase the work of the [CIB Working Commissions and Task Forces](#) and include sessions focussing on the ongoing

research of our global members. There will also be thematic keynotes and industry sessions. We are planning to feature presentations on state-of-the art infrastructure and building projects currently under construction around Melbourne, including the Melbourne Metro, road tunnels, freeway projects, rail separations and numerous high-rise buildings for housing and commercial purposes.

The conference will offer both in-person and virtual attendance options.
